

## Kessebohmer Waste Bin – Product Update 11/20/18

We are happy to announce that some product improvements have been made to the Kessebohmer waste pullout. This has resulted in us issuing new part#'s for this pullout.

The pullout still mounts the same, performs the same, and takes up the same amount of space in the cabinet. The dimensions listed on the catalog and website for the old – are still correct for the new version.

So what has changed...

1. The side rail has been modified to a “V” shape. This new design provides more stability for the door bracket – especially when used with the 52qt bins in a full height door application.
2. The pullout frame has 2 extra holes added that allow for a mechanical push to open device to be added to the unit.

**OLD**

**NEW**

Here is a complete cross reference list for the OLD to NEW.  
We will now be stocking the waste pullouts in both complete sets and as individual parts that you can order separately if you prefer.

If you would like to get a complete unit with the pullout, bins, mounting screws etc – use this list:
